Customer Premise Equipment (CPE)

Customer Premise Equipment

Rightway Online is positioned to provide its customers with best-in-class solutions that are tailored to the customer's application and budget.

Multiple Subscriber Station Solutions (CPE)

The wireless range extender is perhaps the most expensive one-time cost of connecting to the municipal Wi-Fi network. Rightway Online stays on top of the latest in CPE technology. From our USB Wireless Bridge at less than \$160 to integrated roof-mounted flat panel units at less than \$400 to business class wireless mesh routers, Rightway Online can provide the solution that is right for our customers.

THE RIGHT EQUIPMENT, THE RIGHT SOLUTION.

THE RIGHT CHOICE.

Rightway Online's Customer Premise Equipment (CPE) is designed to help citizens and businesses connect to municipal Wi-Fi networks. We meet the unique infrastructure needs that municipal Wi-Fi networks have by providing equipment, installation and maintenance solutions.

Rightway Online's Customer Premise Equipment (CPE) serve as a direct link to equipment and installers that allow citizens and businesses to connect to municipal Wi-Fi networks.

Our team will assist you in understanding what equipment is needed to connect to the municipal Wi-Fi network and will work with you to provide cost effective solutions that allow you to connect to the network.

Rightway Online's Customer Premise Equipment (CPE) provides you with:

- **Reduced cost** — Our dedicated team has created a comprehensive list of equipment that has been tested and configured to connect customers and businesses to the municipal Wi-Fi network, saving you time and minimizing your out-of-pocket expenses.
- **High quality** — Rightway Online is an independent company and provides any number of product solutions depending on the market, environmental and customer location requirements.
- **Comprehensive customer support** — We provide end-to-end, pre-approved solutions that satisfy your customer premise equipment requirements.
- **Flexibility** — We deliver a unique one-stop-shop, which includes a variety of equipment solutions that are able to connect you to the municipal Wi-Fi network.

The Standard for
Wireless Fidelity.

The Case for Customer Premise Equipment

Philadelphia, Pennsylvania, New Orleans, Louisiana, Seattle, Washington, St. Cloud, Florida, and Corpus Christi, Texas. What do all these cities have in common? They all are implementing city wide wireless broadband networks, otherwise known as municipal Wi-Fi networks. While these municipal Wi-Fi networks are at times shrouded in controversy, it's becoming increasingly evident that the efforts of those who choose to build these networks will greatly enhance the opportunities and conveniences provided to the visitors, citizens, businesses and all other communities of their respective cities. It is the opportunities and conveniences of the Wi-Fi network that is prompting communities throughout the World to begin deploying municipal Wi-Fi networks.

A conservative estimate is that once a municipal Wi-Fi network is completely deployed and is providing wireless Internet access citywide, approximately 30% of the city's population will, within the first year of deployment, begin to actively use the network. The benefits of the municipal Wi-Fi network will extend to areas of economic development, educational advancement, government improvement and increased tourism. Those who choose to deploy municipal Wi-Fi networks have a bright future provided that they can build a network that will be used by the visitors, citizens and businesses of the community.

While the future is bright for municipal Wi-Fi networks, there is still one question that remains to be answered. How will customers connect to the municipal Wi-Fi network? The ability to connect customers to the municipal Wi-Fi network is of utmost importance. Often times average PCs have low-power Wi-Fi cards. They may be able to receive the signal but do not have the strength to send the signal back. A few of the newer laptops may have the ability to connect to the wireless network with the built-in wireless network card, but for most, there will be a need for customer premise equipment.

Rightway Online has spent the last two years testing a variety of range extenders and amplifiers available on the market today with the municipal Wi-Fi network located in Corpus Christi, Texas. Rightway Online's testing has found what products will and will not allow customers to connect to municipal Wi-Fi networks. Rightway Online's extensive testing has been able to connect a growing number of users in Corpus Christi to the municipal Wi-Fi network and we are working continuously to provide the best possible solutions for connecting our customers to the municipal Wi-Fi network in Corpus Christi, Texas and in other locations.

Rightway Online is committed to continue testing new products as they hit the market to ensure that we are providing our customers with the right equipment for connecting to municipal Wi-Fi networks. Rightway Online prides ourselves on finding the best possible solution for our customers and we are committed to ensuring that when customers choose Rightway Online as their CPE provider, they have chosen a company that is dedicated to connecting them to the municipal Wi-Fi network of their choice. Rightway Online is the right choice with the right solution to provide you with the right equipment needed to achieve optimum connectivity.
